Your Financial Independence is at the Heart of Everything We Teach

Today's Stock Traders' and Investors' Free Wrap is based on EXTRACTS from Editions 405 & 406 of our Mentoring style 'Investing & Online Trading' Newsletter

1. Now Only 1.5 Weeks Before Boot Camp!

Jim Berg's Boot Camp is our main event for the year. It is suitable for all levels of experience, from complete beginners, through to seasoned traders/investors.

We recently received a call from a Member who asked; *"If I bring a friend, am I able to split our costs?"* We answered "yes" he could – all he had to do was to invite the friend to attend at the special **70% Partner Discount** - and to work out the split between themselves after he ordered.

You can also invite your own partner, family member or friend to attend with you and share the experience, have fun and bounce ideas together over the weekend.

Click to view this [Youtube Video](#) on what others thought of Jim's last Boot Camp >>>> or, if you have any queries, feel free to [Contact Us](#).

We have **only 16 places left**, so to secure your seat(s) or for more info, [Click Here Now >>](#)

2. New Trading & SMSF Signals Update

Our thanks to all those who have emailed us in recent weeks to express their interest in Jim Berg's new upcoming Trading and SMSF Investing Signals. Due to unforeseen circumstances, the release was delayed and is now hopefully planned for later this month.

The number of new Members we take on when we initially launch will be limited. To date, we have received many Expressions of Interest, so to be fair, we will offer places in list order. If you would like **to be one of the first to be notified** when we launch, please:

- Send us an email now to Info@ShareTradingEducation.com and
- Simply type in the subject line, which Service(s) you could be interested in, i.e. **"Trading"**, **"SMSF"** or **"Both"**

and we will send you the details soon.

Avalanche Selling & Kangaroo Tails

How Data Analysis Drives Trading

By Jim Berg, John Atkinson, Larry Levin & Benjamin Pimentel

The charts of the Dow and Nasdaq on Tuesday 23 April 2013 show a large sudden intraday drop, followed by an instantaneous recovery.

USA Tuesday

In this article we answer the questions we received; 'What caused this?' and 'Does Jim have anything in place to protect against being sold out unnecessarily if a similar situation occurs on shares I hold?'

At first sight, this looks like a classic example of what John described as 'Avalanche Selling and Kangaroo Tails' in his first ebook, ['The Atkinson-Guppy Articles'](#) - caused by computerised automated conditional stop loss brokers savagely cascading sell orders into the market, with prices often rebounding several per cent within minutes.

USA Tuesday

In that ebook, Darryl Guppy and John wrote:

'The Kangaroo Tail is an intraday pattern of trading. It is triggered by a minor price fall that accelerates as stop loss orders are triggered. This is also called 'Avalanche Selling'.

The pattern develops if the stop loss order structure sets a lower than market execution price. This means the stop may be triggered at \$1.00 but the sell order is active within a buffer set 10% or 15% below the trigger price.

A stock with multiple stop loss orders based on this buffer execution may experience a cascading effect. If there are not many orders in the bid stack, there is a high likelihood that traders who may not have specified a lower limit or who are working with a 15% in-built buffer limit may be sold down like a pack of falling dominos as their system sells through all levels queued to buy down to -15% below current levels.

Astute traders move into the market and buy the rebound, lifting prices rapidly back to their previous levels. This rebound creates the kangaroo tail.

It is an intraday trading opportunity, but a hazard for those who want to use stop loss points as an effective management tool.'

[Larry Levin](#) is a professional futures trader who has been in and around the S&P 500 futures pit at the largest futures exchange in the world; the Chicago Mercantile Exchange (CME), for over 20 years. In this particular case, on Tuesday 23 April, Larry wrote in an email we received:

' Welcome to the new world where technical snafus and terrorism fears can move markets in a heartbeat now that the High Frequency Traders and the Algos are tied to Twitter.

A fake tweet with terror overtones caused financial markets to gyrate wildly for a few minutes midday Tuesday. The market was cruising along happily on its perma-liquidity rally track, before plunging dramatically at 12:07 p.m. CT after a fake tweet on the Associated Press' Twitter site reported that two bombs had gone off at the White House and injured President Obama.

The Dow dropped nearly 143 points and the E-mini S&P fell 15 points in a three-minute span from 12:07 p.m. to 12:10 pm CT. ...But by 12:17pm CT, the market regained all of its losses once the AP noted on its website that its Twitter account had been hacked and that the report was untrue. The White House also confirmed that the tweet was a hoax.

Until this week, many Wall Street bankers and traders had no access to Twitter. Despite the fact that Twitter is now where lots of breaking news happens first, most big banks shut off access to social networks on their systems for compliance and security reasons.

But that's all changed. Earlier this week Bloomberg announced that its terminal, the subscription data service (price: more than \$20,000 a year) that is used by more than 300,000 Wall Streeters to look up all kinds of financial information, will include a Twitter feature. The TWTR terminal feature doesn't allow users to tweet, but it does let them read the tweets of certain news services, financial writers, economists, and bloggers selected by Bloomberg's terminal team.

Welcome to the new wacky world of social media investing. With the savvy and sophistication of the cyber hackers, this most likely won't be an isolated incident. Buckle up, it may be a bumpy ride.

Benjamin Pimentel is a MarketWatch reporter based in San Francisco. On Friday 26 April Benjamin [wrote](#):

When computers take charge of stock trading

' Tuesday's brief and shocking market crash, which roiled stock and other financial markets, was triggered by language-reading software that got tripped up by such words as "explosion," "Obama" and "White House."

The words that triggered the market tumble, contained in a hacked Twitter message from the Associated Press about an attack on the White House that injured President Barack Obama, turned out to be bogus.

But the tweet sparked a market selloff that vividly dramatized the power of a new generation of sophisticated computer software that analyzes language and uses algorithms to allow high-speed trading in financial markets.

Disclaimer: Direct investing in the stock market can result in financial loss. Historical results are no guarantee of future returns. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. Stock tips or 'buy' or sell recommendations are **not** provided. Computers operating at superhuman speed have caused market turmoil before.

What's different this time is that the software at the root of Tuesday's so-called "tweet retreat", which caused the Dow Jones Industrial Average (DJIA) to briefly tumble 145 points, examined natural, or plain written, language rather than the real-time or historical performance of stocks'.

In the aftermath of Tuesday's incident, market participants had many questions about the software, how it works, who uses it and what those users think about its impact on the markets.

What follows is an edited transcript of an interview with Armando Gonzalez, Chief Executive of RavenPack, an automated text analysis firm that uses such software to analyze news stories, regulatory filings and other documents in order to inform trading decisions.

Q: What caused the market to drop so quickly after the Associated Press Twitter message?

This was caused by a few relatively small high-frequency traders. They would have to be small in size and very few. The market recovered very quickly, none of the institutional firms used this. It was very quick and some algorithms must have reacted to the reputable news service of Associated Press. For our programs, we decided to build relationships with news media outlets, that way you secure your connection to the original source and minimize [the chance of] being hacked.

Q: Why are algorithms so effective and widely used?

Where it's potentially more effective than a human analyst is its speed. For example, it takes 350 milliseconds to blink your eye. We read every story on every major newswire in less than 200 milliseconds using these programs. It's faster than you can blink and you have a program that has read multiple newswires. It also allows you have a system that reads a lot of different sources.

Q: How are things likely to change after this Twitter hacking and the reaction in the markets?

For starters, it will put serious emphasis on the use of Twitter and social media. Twitter is working on this and has been for some time to [put in place] security protocols. They have received complaints from many people and organizations that have been hacked.

They are working on new ways for authentication. The emphasis will be on pushing these media outlets to secure their accounts, and more businesses are pushing for more verified accounts. We think we're seeing more verified accounts and just tools that help you as a consumer verify the authors identified.

Q: Is there concern that the AP tweet incident will spark copycats?

Yes, especially with social media there is a higher risk of market manipulation through hacking. If there is a way for hackers to take over verified [social media] accounts, that is the danger. It is a real threat that they can manipulate the market through accounts and channels that are influential.

That is why you cannot build a strategy on Twitter, no one serious in the space is solely relying on Twitter. Professional media organizations play an important role in society; you can't trust Twitter as a network on its own

How data analysis drives trading

1. Before the rise of big data and social media, computer algorithms affected trading decisions based on the way stocks moved historically or in real-time. 
2. Today, computers actually do the buying and selling based on the fast processing of huge amounts of information. 
3. The information can be single, predictable sources, such as SEC filings or company press releases. "They are just scanning that one document," says Sean Gourley, CTO of Quid Inc., a data analysis firm. "They know that document is going to be there. They know the language that will be used." 
4. With more sophisticated systems, computers can now scan random sources, including news headlines and Twitter posts. 
5. Programmers create algorithms based around code words and information sources. For example, words such as "BOMB," "TERRORIST" and "ATTACK" that show up on sources deemed credible, such as the website or Twitter feed of a major news organization, can raise a red flag about an "unusual" or "significant" event.
6. The computer can then send buy or sell orders. In Tuesday's case, the system can cause "massive reduction in liquidity," Gourley notes.

In answer to the 2nd part of the question "...does Jim have anything in place to protect against being sold out unnecessarily if a similar situation occurs on shares I hold?"

Often, a share may trade below a stop level during the day (e.g. a previous Low) then rebound and close back above it.

Those who use conditional intraday stops would come home to find their shares had been sold automatically and unnecessarily.

For this reason, Jim's Trading Plan does **NOT** include the use of intraday stop losses.

In contrast, Jim uses **END OF DAY** Stops such that an exit is triggered only if there is a **CLOSE** below his Initial Stop Loss or Adjusted Stop, or 2 Closes below his JB Volatility Trailing Stop (on either a daily or weekly basis for daily and weekly charts respectively).

If there is a genuine instantaneous market crash (e.g. after the News broke on 9/11), then a conditional intraday stop would close all positions instantly at whatever price could be achieved, subject to available buy orders.

However, if a similar situation to Tuesdays or those described in John's '[Atkinson-Guppy Articles](#)' ebook occurs in the future, then using Jim's Trading System you can rest assured that your shares will not have been sold prematurely and that your original Trading Plan remains intact.

Become a Scholar of Jim Berg's common sense trading & investing approach so you will know:

- ✓ **WHICH** stocks / shares to Buy
- ✓ **WHEN** to Buy and, most importantly
- ✓ **WHEN** to SELL

This is **NOT** a publication of general commentaries or articles on how the stock market works, leaving you without a track to follow.

In contrast, every weekly Edition of the '[Investing & Online Trading](#)' Newsletter will:

Teach you how Jim Berg thinks and **how he trades his own money**, step-by-step and

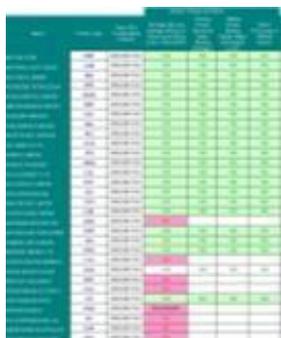

Provide you with **Jim's own Watch Lists** of shares / stocks to help you identify potential new trading opportunities

That's why our Members are not simply newsletter 'readers'. We prefer to regard them as 'Scholars' - in pursuit of profound and specialist knowledge:

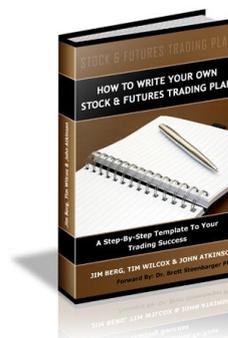

- 1) To **create additional income** in the short term and
- 2) Ultimately, the skills and capital needed to be able to **trade / invest for a living** and achieve financial independence.

Special Offer: Become a Scholar of Jim's mentoring-style Newsletter today and you will also gain instant access to download your **FREE Bonus Welcome package, worth \$194:**

Free Stock Selection Tool
(\$97 value)

Free Trading Plan Guide:
(another \$97 value)

There is no lock-in contract, so **you may cancel at any time.**

Now Only **1.5 Weeks** before Jim Berg's Unique Mastermind Boot Camp

"... Over the years, two of my children have done basic courses with Jim and now my daughter in law Stephanie has joined our family ' *Jim Berg Fan Club*'.

I am now a full time trader and live by my trading alone thanks to Jim. He has taught me trading discipline.

In a paragraph, Jim has taught me several cardinal rules:

- Stop loss discipline
- Let your profits run
-

Develop a Trading Plan (write it down) and back test it with paper trades to a point where you have confidence in you plan so you are able to implement your trade when under stress of falling prices.

Now 75 years old, my most grateful thanks go to Jim and his team for all you have given me and my family over the years. Best wishes to all traders. Stick to the rules.

Jan Carden, Private Trader and Boot Camp Graduate, May 2011

This 'hands-on' learn-by-doing event **is suitable for all** – from complete beginners, through to seasoned traders and investors with many years of experience.

Previous attendees, with a wide range of knowledge, have consistently told us they have left with all the 'nuggets' they needed to take them through to the next level -- and many traders come back year after year for more!

You will find [Jim Berg's 2013 Boot Camp](#) is the best way for you to:

- ✚ **Save yourself time, money, frustration & very costly trial and error** in finding out how to trade and invest successfully
- ✚ **Put yourself on the 'fast track'** to completely understand Jim's trading system, so you can *create your own profitable trading plan*
- ✚ **Fully absorb all the 'nitty-gritties'** of Jim's tested short and long term trading strategies **IN DEPTH** - so you don't miss out on any of the intricate details
- ✚ **Ask Jim all your questions in person** - to help solve all your own trading problems and boost your trading/investing skills and performance
- ✚ **Take 'time -out' and enjoy a weekend away** with like-minded traders – or longer if you choose - using the discounted accommodation rates offered by the Resort.

The vital skills of Money & Risk Management will also be covered and we introduce a new session 'How To Create Your Own Trading Plan'.

You will receive Jim's 'Trading Strategies Home Study Course' before attending:

- ✓ A compendium of speakers' slides in full colour
- ✓ DVDs of the weekend and
- ✓ **12 months direct email support from Jim afterwards.**

To discover more, or to secure your seat to Jim Berg's *first Boot Camp in 2 years*,
