## Technicians vs. Analysts in a CNBC stock-picking slapdown: Who Wins? By Mark Hulbert

Customer Caution Notice: Stocks, ETFs and Funds mentioned are NOT buying or sell recommendations. The opinions and views on events, market direction and price targets provided by others in this Report are not necessarily shared by ShareTradingEducation.com. Refer to the back page of this Report for more.

Mark Hulbert is a senior columnist at MarketWatch and the editor of the Hulbert Financial Digest, which since 1980 has been tracking the performance of investment advisory newsletters. The HFD became a service of MarketWatch in April 2002. Hulbert has also been an investment columnist for The Wall Street Journal, the New York Times, and Forbes magazine. On Friday 4<sup>th</sup> September, [Mark wrote](#)

*A new academic study finds that the stock recommendations made by technicians on CNBC's 'Talking Numbers' show have outperformed those from fundamental analysts.*

The age-old debate between technicians and fundamental analysts appears to be on the verge of being answered.

Over investment horizons ranging from one month to one year, top technicians come out well ahead of leading analysts.

In fact, according to the academic study that reached this conclusion, it's not even close: While the average buy recommendation from well-known technicians outperforms the broad stock market by 8% over the subsequent nine months, the average stock recommended by leading fundamental analysts underperforms the market.

Sandy Villere, a Portfolio Manager with the Villere Funds, makes the case for real estate company Howard Hughes Corp., auto parts supplier LKQ, and investment advisory Financial Engines.

This groundbreaking [study](#), which just began circulating in academic circles, was conducted by Doron Avramov and Haim Levy, finance professors at the Hebrew University of Jerusalem; and Guy Kaplanski, a finance professor at Bar-Ilan University.

The focus of their study were a thousand pairs of recommendations made between November 2011 and December 2014 on the TV show "Talking Numbers," which is jointly broadcast by CNBC and Yahoo ([YHOO](#)).

The first half of each pair was a recommendation from a top technician about a stock in the news; the second half was a recommendation about that same stock from a leading fundamental analyst.

In retrospect, Professor Avramov told me in an interview, it's curious that no one before bothered to analyze these recommendations, since the show provides an ideal laboratory for comparing the relative worth of the two investment approaches.

The researchers measured the performance of each recommendation beginning with its closing price on the day the show first aired. That's a crucial methodological detail, since that means the researchers are excluding the price impact of the recommendations in the first minutes after the show airs.

Consider first the stocks that the technical analysts identified as strong buys. They on average proceeded to outperform the overall stock market by 7.9% over the subsequent nine months, while the stocks they recommended as strong sells underperformed by 8.9%.

That spread of 16.8 percentage points is highly significant from a statistical point of view. As the professors put it in their study, it means that *"technicians display rather impressive stock-picking skills."*

Contrast that with the performance of the fundamental analysts. The researchers found that their strong buys proceeded on average to underperform the market over the nine months following recommendation — though not by enough to conclude at the 95% confidence level that these analysts were actually worse than random.

Even worse, the stocks that these analysts rated as strong sells did not perform appreciably differently than those they considered strong buys.

It won't be easy for fundamental analysts to wriggle out from underneath the weight of these results. Since the TV show creates a head-to-head comparison on the same stocks over similar time horizons, the usual escape valves have been closed off.

One could argue, of course, that the value of fundamental analysis only shows up over the longer term of more than a year. That is entirely plausible, though — if so — fundamental analysts upon reading this new academic study might decide not to even engage in the Talking Numbers TV show's shorter-term forecasting contest.

By the way, technical analysts don't emerge completely unscathed from this new study. The professors found that, when it comes to broader asset classes such as stock-market industries and sectors, bonds, and commodities, the forecasts of both technicians as well as analysts are no better than random.

Still, when it comes to forecasting the direction of individual stocks over the next several months, this new study definitely shows that top technicians deserve our attention more than leading analysts.

**Customer Caution Notice And COPYRIGHT** Direct investing in the stock market can result in financial loss. The past performance of this product is not and should not be taken as an indication of future performance. Caution should be exercised in assessing past performance. This service, like all other financial services, is subject to market forces and unpredictable events that may adversely affect its future performance. Results reflect absolute trading stop loss discipline. Case study trades are monitored and managed in real time, and management reports are delivered every week in the Report. Except where noted, all case study trades are notional examples using reasonably attainable entry and exit points. Unlike an actual performance record, simulated results do not represent actual trading. Also, since the trades have not actually been executed, the results may have over or under compensated for impact, if any, of certain market factors, such as lack of liquidity. No representation is being made that any account will or is likely to achieve profits or losses similar to those shown. Full trade summaries, with charts, are provided each year. In preparing this newsletter ShareTradingEducation.com ("STE"), as Corporate Authorized Representative (CAR No. 322726) of AG Capital Markets Pty Ltd ("AG") AFSL 292464, has not taken into account the investment objectives, financial situation and particular needs of any particular investor. Before making an investment decision on the basis of this Report and the accompanying material, the investor needs to consider, with or without the assistance of an adviser, whether the advice is appropriate for them in view of their individual financial circumstances. Any projections made in this letter are estimates only and no guarantee is provided that those projections will be realised. Further, STE and/or Avestra do not warrant the accuracy of the information in this Report. STE and/or AG and its officers, employees, agents, associates and alliance partners ("Associates") may have or may obtain an interest in the securities referred to in this letter and will receive commissions, brokerage and other fees from dealing in the securities or advising in respect of the proposed listing of the securities. AG and/or STE believe that the information contained in this letter was accurate at the time it was compiled. AG and/or STE do not warrant that the information contained in this letter is accurate, complete, reliable or up to date and to the fullest extent permitted by law disclaims all liability of AG, STE and its Associates for any loss or damage suffered by any person by reason of the use by that person of, or their reliance on any information contained herein, whether arising from the negligence of AG, STE or its Associates or otherwise. These analysis notes are based on the authors' experience of applying technical and fundamental analysis to the market and are designed to be used as a tutorial showing how fundamental and technical analysis can be applied to a chart example based on recent trading data. Stock tips or 'buy' or 'sell' recommendations are not provided. This Report is a tool to assist you in your personal judgment. It is not designed to replace your Licensed Financial Consultant or your Stockbroker. It has been prepared without regard to any particular person's investment objectives, financial situation and particular needs because readers come from diverse backgrounds, with diverse objectives and financial situations. **Liability:** This information is of a general nature only so you should seek advice from your broker or other investment advisors as appropriate before taking any action.
